## SLIM LINE WIDE 20 mm

SLW20; 23,2 x 27,7mm **IN STOCK**

The key feature of this LED profile, is the way it has been designed as an architectural LED solution to look deceptively larger as a surface ceiling mount fitting, despite its quite modest dimensions overall. With an 18mm inside width, all rigid LED PCB's in our very wide range of options can be easily accommodated.

## RECESSED SLIM LINE WIDE 20 mm

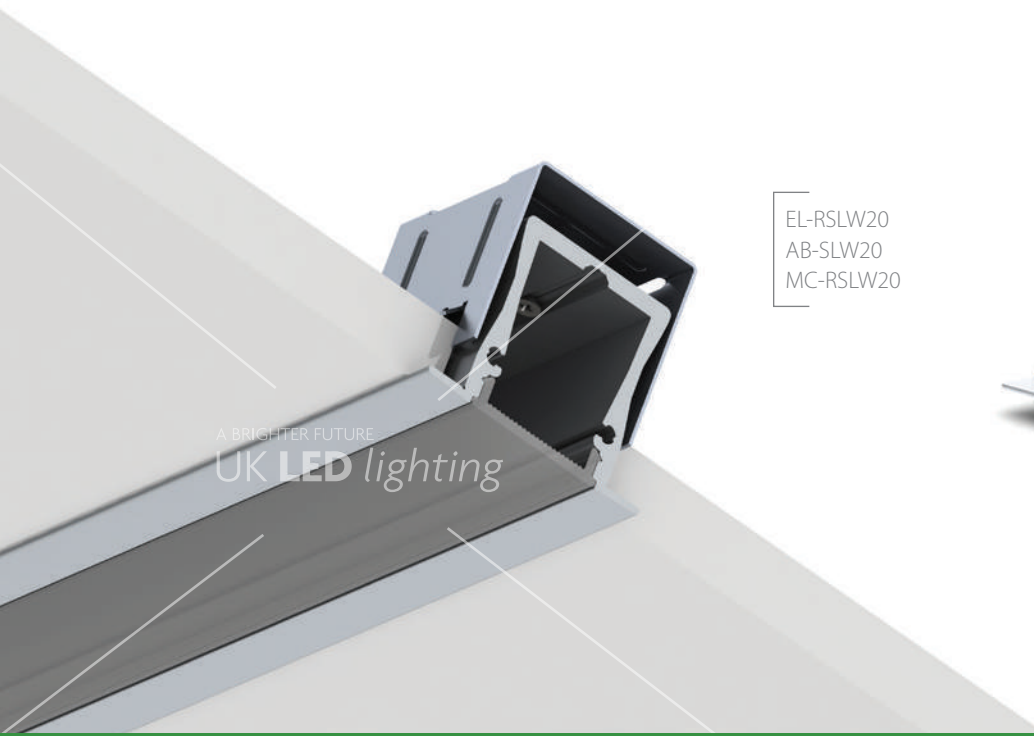

RSLW 20; 34,2 x 27,7mm **IN STOCK**

An eye catching wider recessed LED profile option; designed for use in gypsum ceilings, walls, store shelving and wood furniture, and though unobtrusive in actual size, the line of light through the frosted diffuser, creates the illusion the fitting is much bigger than it actually is.

## DESCRIPTION

This profile is a design modification of Slim Line Wide 20mm for side wall mounting for downward illumination. With a small mounting base and matching end caps, SLW20B is a very striking looking LED luminaire profile which can accommodate 18mm wide PCB to deliver impressive levels of light from such a small housing.
