

Smooth Powerline Wide 116 Trimless

41mm x 116mm

Is a very contemporary slim looking trimless LED luminaire, which has a high silver anodised finish, and comes with a wide 116mm UV frosted polycarbonate cover that produces a smooth even distribution of light across the whole surface of the diffuser. The trimless effect is designed specifically for gypsum ceilings, but is equally suitable for wall recessing to the ceiling with clever use of 90 degree connectors, opening up unlimited applications both for lighting architectural and designer projects.
