RPL70 LED PROFILE

RPL70 US; 41 x 109 mm

So far the biggest profile from Plaster Board Line (70mm width of diffuser). The raw aluminum surface and the matching shade emphasize the quality of the product. Innovative design provides unique features such as: Premade angle modules, mounting rail for the junction box and dedicated openings for the ease of installation. Thanks to efficient heat dissipation surface, it can be safely used for high power LED strips (up to 50W/m). The profile can be equipped with reflectors made of highly polished aluminum with a light reflectance (> 95%). This solution improves the luminaire's efficiency by 10-20%. The profile has been designed so that there are no visible points of light. Depending on external conditions, we offer our clients three types of UV-resistant diffusers: matt & transparent and prismatic (UGR <19).

Temperature (Solid) [°C]
Ambient temperature : 25° C
Total power: 60 W/m
